

ABSTRACT OF THE DISCLOSURE

The present invention provides various embodiments of a gutter cap and a locking system that couples the gutter cap to the gutter. The locking system includes a clip having a front portion configured to interlock with the front hem edge of a gutter and a back portion configured to interlock with a hem edge of a gutter cap. A variable fastening portion of the clip is used to attach the clip to the back of the gutter. The variable fastening portion receives a screw that is screwed into the back of the gutter, thereby attaching the gutter to the clip. For larger gutters, the screw is screwed in less than for smaller gutters. The clip has a support bracket that rests against an inside surface of the gutter and holds the clip in an installment position to facilitate installment.
